JOB OFFER

INTERACTION DESIGNER

_THE AGENCY

Since 2002 Use Design has been working on projects in the domains of software usability, user interface design, digital product identity and innovative interaction concepts for a large variety of customers and professional areas.

We create user interfaces for all kinds of support (computers, embedded technology, television, control room panels, multimedia devices, mobile phones, home appliances...) and for a vast scope of domains (automotive, medical, consumer products, professional software...).

In order to further develop and enhance our team we are looking for a new **interaction designer**.

_DESIRED PROFILE

More than anything we appreciate people who are curious, open, creative and enthusiastic about their profession, independent of their educational background and origins.

We would like our new designer to have a solid knowledge of human factors (ergonomics, cognitive science, psychology, social sciences and so on), allowing him/her to fully understand the users in their context and daily environment, with their specific problems.

During his/her study and working experience our new designer should have acquired the skills necessary to define user profiles, create use scenarios and come up with interaction concept proposals. S/he should be able to visualize these proposals by means of diagrams, screen mockups and wireframes (both low and high fidelity).

The five human senses should have no secrets for our new designer, so that s/he can create interaction designs for any kind of support - graphical user interfaces, objects, touchscreens and vocal interfaces. One of the designer's tasks at the agency will be to keep an eye on the development of new interface technologies.

We would like our designer to be a firm believer in uses-centered approach and sensitive to new developments and trends in the field. Like us, our new designer should be emphatic, mindful and have a passion for observing and listening to users.

Our designer should be at ease in a team setting, collaborating with experts from other disciplines, whether it is behind his/her Mac (or PC), during a workshop with the client or on a user visit (which take place mostly in France).

As a minimum, the designer should have a solid knowledge of 2D graphical tools (such as Adobe suite) or any kind of software allowing to create wireframes. An affinity with visual design would be a big plus in order to collaborate well with our user interface designers. This feeling for visual design will allow the interaction designer to validate the quality of graphic design proposals following his/her interaction concepts.

2011

JOB OFFER

INTERACTION DESIGNER

With a good knowledge of spoken and written English and/or other languages (members of the EU are welcome to apply) the new designer will be able to integrate into our international projects.

His/her expertise will allow the designer to communicate his/her ideas to other people in the project. In his/her attitude and approach s/he will always keep a perspective of constructive criticism and be ready for several iterations before arriving at the final solution. S/he will organize his/her work in an efficient way, respect the deadlines and be able to handle multiple projects on a daily basis.

Use Design agency will offer the new designer a permanent or a temporary contract, with a salary and conditions based on his/her background (fresh from college or with several years of working experience).

In his/her daily work and for various projects our new designer will participate in all the stages of user interface design, from concept and design elaboration to product realisation, working on:

- . user observations in the field,
- . user interviews,
- . user profile definition,
- . use scenario creation,
- . interaction concept prototyping,
- . user interface wireframes,
- . follow-up on the graphic interface design.

The designer will also participate in:

- . workshops and brainstorm sessions,
- . user tests,
- . client meetings.

_FOLLOW-UP

If you feel that your profile matches the above, if your professional goal is to match a profile such as described or if you simply think that your place is with Use Design, please send your CV and portofolio examples (such as reports, sketches, wireframe examples) to Patrick AVRIL (avril@use-design.com). We will then contact you as soon as possible to arrange a meeting at our agency.
